Module Installation

WARNING: Do not add or remove modules with field power applied.

Step One: With latch in "locked" position, align connectors on the side of each module and stack by pressing together. Click indicates lock is engaged.

Step Two: Attach field wiring using the removable terminal block or Z/PLink wiring system.

Check all latches are secure after modules are connected.

Step Three: To unstack modules, pull locking latch up into the unlocked position and then pull modules apart.

If desired, assign a *User Tagname* to each input point (channel) selected and to each *Status Bit Item*.

1. Cable + ZIPLink Module = Complete System

2. ZL-RTB-COM provides a common connection point for power or ground

Linear Scaling

The Scale (Linear) function can be used to:

- Convert analog field input signals from the range which is native to the analog input module to an application specific range.
- Make other linear conversions in ranges appropriate to the application.

Non-Linear Scaling

The Scale (Non-Linear) function can be used for Non-Linear applications.
